

Canadian Canoe Museum

Client: Canadian Canoe Museum

Completion Date: 2024

Services Provided :

- Site Servicing and Grading
- Project Management
- Stormwater Management
- Erosion and Sediment Control
- Tendering
- Contract Administration

Engage completed the civil engineering design for the Canadian Canoe Museum project located on the shores of Little Lake in the City of Peterborough. As a part of this project, Engage completed the design of internal roadways, pathways, erosion control of the shoreline, floodplain review and stormwater management design including many Low Impact Development strategies such as an infiltration trench, rain garden and permeable pavers, and multiple outlets to Little Lake. The project was completed utilizing an Integrated Project Delivery (IPD) methodology, which involved thorough coordination amongst project team members including Basterfield and Unity.

As a part of the project, Engage completed or assisted with consultation and permit applications with many agencies including the City of Peterborough, ORCA, TSW, DFO and the MECP. The project also involved indigenous and public consultation.
